Solijon Abduvaliyev (DevFayzullo)

Frontend Developer

Frontend Developer focused on building clean, accessible, and performant web apps. Specialized in React and Tailwind CSS with practical experience in state management, API integration, and component-driven design.

GitHub	https://github.com/DevFayzullo
Portfolio	https://devfayzullo-s-portfolio.netlify.app

Skills

Core	Responsive UI, Accessibility (ARIA), Design Systems, UX collaboration
Performance	Code-splitting, memoization, lazy loading, image optimization, Lighthouse tuning
Languages	JavaScript (ES6+), TypeScript (learning)
Frameworks	React, Next.js (basic), Vite
State/Data	Redux Toolkit, React Query
Styling	Tailwind CSS
Tools	Git, GitHub, ESLint/Prettier, REST APIs

Projects

ChatBot UI (React + Tailwind)	Built a static AI chatbot interface with predefined responses. Implemented responsive layout, typing animation, and clean component structure. Focused on accessibility and keyboard navigation.
Rest Countries Explorer	JavaScript app displaying country details with search/filter. Implemented API data fetching, debounced inputs, and light/dark theme.
Portfolio Website	Personal portfolio built with React + Tailwind. Optimized assets, added component reuse, and improved Lighthouse performance.

Experience

Frontend Projects (Self-directed)

- Implemented component-driven UIs with React + Tailwind.

- Managed state with Redux Toolkit; used React Query for data fetching/caching.

- Improved performance via tree-shaking, code-splitting, and image optimization.

- Maintained documentation and READMEs; used GitHub flow for collaboration.

Education

B.S., Software Convergence (Ongoing)	University — Coursework includes web development, algorithms, and software engineering.

Languages

Uzbek (Native), English (Intermediate), Korean (Learning)
